PROFESSIONAL OVERVIEW

Senior DevOps/SRE Engineer with 5+ years building and reliability-hardening infrastructure across Azure, AWS, and OCI. Built GitOps-driven CI/CD with ArgoCD and Azure DevOps managing 50+ microservices, and standardized multi-cloud provisioning with reusable Terraform modules across AKS, EKS, and GKE. Cut MTTR from 2 hours to under 45 minutes and incident resolution time from 90 to 40 minutes by building SLO/SLI-backed observability with Prometheus, Grafana, and ELK — and personally led root-cause debugging on production Kubernetes networking failures. Enforced RBAC and policy controls across 10+ Azure subscriptions with zero audit findings, and self-taught Helm and Ansible AWX to ship a Prometheus-to-Teams alerting pipeline and SSL/TLS-secured automation platform from scratch.

TECHNICAL SKILLS

- **Cloud Platforms:** Microsoft Azure (ACR, Key Vault, Storage), AWS (EC2, S3, Lambda), OCI (Firewalls, Security Groups, VCN), On-Prem
- **Infrastructure as Code & Automation:** Terraform, ARM Templates, CloudFormation, Ansible, Ansible AWX
- **Containers & Orchestration:** Kubernetes, AKS, EKS, OKE, Docker, ECS, Elastic Beanstalk, Helm, Kustomize
- **GitOps & CI/CD:** Azure DevOps Pipelines, Jenkins, GitHub Actions, GitLab CI, ArgoCD, Nexus, SonarQube
- **Observability & Monitoring:** Prometheus, Grafana, Loki, OpenTelemetry, ELK Stack, Fluentd, Azure Monitor, CloudWatch
- **Networking & Load Balancing:** Nginx, Elastic Load Balancer (ELB), VPN, MetalLB, MongoDB (Sharding, Replica Sets)
- **Security & Compliance:** Qualys, Trivy, HashiCorp Vault, RBAC, Azure Policy, Zero Trust, SOC 2
- **Scripting & Version Control:** Python, Bash, PowerShell, YAML, Git, GitHub, Bitbucket
- **Methodologies & Operating Systems:** Agile/Scrum, SDLC, GitOps, Linux Distributions, Unix (Solaris), Windows Server

EXPERIENCE

DevOps Engineer

07/2023 - Present

Matilda Cloud

Dallas, TX

- Architected **GitOps**-based CD pipelines using **ArgoCD** across **Azure DevOps** (ACR, Azure Repos) and an on-prem cluster managing **50+ microservices** - enabling automated drift detection, zero-downtime progressive rollouts, and full audit trail for change management.
- Owned end-to-end production reliability for Azure workloads: on-call rotation, incident response, and runbook automation that prevented recurring failures, reducing **MTTR from 2 hours to under 45 minutes** via **Azure Monitor**, Log Analytics, and **Grafana**.
- Resolved a **Kubernetes** networking failure where **MetalLB** wasn't forwarding traffic to a microservice via root cause analysis, remediated by deploying **Nginx** as load balancer; architected a highly-available **MongoDB** cluster using sharding and replica sets.
- Operationalized an **SLO/SLI** framework with centralized observability across **CloudWatch**, **ELK Stack**, and Slack alerting - cutting average incident resolution time from **90 minutes to 40 minutes**.
- Enforced security and governance at scale: **Azure Policy**, **RBAC**, and Managed Identities across **10+ subscriptions** achieving zero audit non-compliance, plus Key Vault and network policy hardening that contributed to **SOC2 compliance** with zero critical findings.
- Authored reusable **Terraform** modules provisioning **AKS**, **EKS**, **OKE**, and **GKE** clusters with full networking (VNets, subnets, load balancers, security groups, firewalls), standardizing secure infrastructure delivery across multi-cloud environments.
- Built and validated **Ansible** automation (roles + AWX) for service configuration and **AKS**-hosted Ingress with SSL/TLS termination via **Nginx**, reducing manual provisioning across environments.

- Built CI/CD pipelines in **Jenkins** integrating **SonarQube** for code quality gates and **Qualys** for image vulnerability scanning, producing Docker images for continuous integration with zero-downtime deployments and high availability.
- Engineered **AWS**-based CD pipeline (Docker, GitHub, Nexus, **CloudFormation**, ELB) and automated environment provisioning via CloudFormation, AWS CLI, and Shell/Python scripting - eliminating manual infrastructure setup across environments.
- Deployed containerized **Java** microservices on **AWS Elastic Beanstalk** and **ECS**, achieving zero-downtime releases and improving deployment frequency from biweekly to daily.
- Standardized **Terraform** workflows with remote state management across **AWS S3**, Azure, and GCP backends, using **terraform graph** to validate execution plans before provisioning — preventing drift and provisioning errors.
- Authored **Helm** charts for **Prometheus** alerting rules and AlertManager configs (via prom2teams) and built **Grafana** dashboards for Kubernetes observability, reducing user-visible incidents and cutting **MTTR**.
- Eliminated operational toil through automation: shell/PowerShell scripts for cross-platform (Linux, HP-UX, Unix) discovery and reporting, **Kubernetes** CronJobs for log rotation and cleanup, secret rotation, and sidecar-based distributed tracing via **ELK Stack**.

CERTIFICATIONS

Microsoft Certified: Azure Administrator – Associate (AZ-104) HackerRank Python HackerRank Software Engineer Intern HackerRank SQL

EDUCATION

Master in Information Technology, University of Wisconsin Milwaukee, CGPA: 3.8 09/2022 – 12/2023
Bachelor in Electronics & Communication Engineering, GITAM University, CGPA: 8.78 06/2016 – 07/2020
